# Car Game manual

A manual teaching you how to install and play the best racing game with the most original name

Installation

1. Unzip the folder titled release into your desired location

How to play

Upon installation of the game you should run the application titled RacingGame.exe

Once you've opened it you will be prompted with the level selection screen pictured below. The controls are listed on the welcome message however there is also a section below for controls. To select a level, use your left and right arrow keys and then press enter to be loaded into your level. The levels have more twists and turns progressively so if you're a less experienced racer start with level 1!

Figure 1 Level select screen

Upon being loaded into the level the game will be automatically paused for you. When you are ready to race press the spacebar to start the game. This will start the enemy car and also the timer so make sure you're ready!

You must race around the track you have selected ensuring not to hit any of the barriers or the enemy car! If you do you will bounce back and take damage reducing your top speed. The enemy car will not try to hit you but if you get in their way, they will not hesitate to run you off the road!

If you wish to take a break at any time press the spacebar to pause the game. This also pauses the timer so don't worry about missing out on a great lap time! If you wish to quit, you must first pause the game and then press the escape key to close the game.

Once you have progressed around the track collecting all the checkpoints you will cross the finish line and complete the lap! You must complete 3 laps to win the game but beware if the enemy car beats you to it, you will lose!

You can see how many checkpoints you have remaining and your current lap in the top of the game window.
